Assignment 1

kummitha jhanavi

March 2022

SOLUTION:
Radius r,
OP = OQ = r
Given, QR = OP
OP = OQ = QR =r
In Δ OQR , OQ = QR
$\angle$ QOR = $\angle$ ORP = 20
And $\angle$ OQP = $\angle$ QOR + $\angle$ ORQ because exterior angle of a triangle is equal to the sum ofthe two opposite interior angles
$\angle$ OQP = 20 + 20
$\angle$ OQP = 40
Now in Δ OPQ
sum of angles in a triangle is 180
$\angle$ POQ = 180 - ($\angle$ OPQ + $\angle$ OQP)
$\angle$ POQ = 180 - 40 - 40
$\angle$ POQ = 100
Now $\angle$ x + $\angle$ POQ + $\angle$ QOR = 180 (sum of angles in straight is 180)
$\angle$ x + 100 + 20 = 180
$\angle$ x = 60
hence value of x is 60 degree

(b) In the figure given below 'O' is the centre of the circle. If QR = OP and ∠ORP = 20°. Find the value of 'x' giving reasons. [3]

assignment 1 figure.jpg

main.tex

```
$\angle$ QOR =  $\angle$ ORP = 20

And $\angle$ OQP = $\angle$ QOR + $\angle$ ORQ
because exterior angle of a triangle is equal to the sum ofthe two opposite interior angles

$\angle$ OQP = 20 + 20

$\angle$ OQP = 40

Now in $\Delta$ OPQ

sum of angles in a triangle is 180

$\angle$ POQ = 180 - ( $\angle$ OPQ + $\angle$ OQP )

$\angle$ POQ = 180 - 40 - 40

$\angle$ POQ = 100

Now $\angle$ x + $\angle$ POQ + $\angle$ QOR = 180  (sum of angles in straight is 180)

$\angle$ x + 100 + 20 = 180

$\angle$ x = 60

hence value of x is 60 degree
```

assignment 1 figure.jpg

main.tex

```
36 $\angle$ OQP = 20 + 20
37
38 $\angle$ OQP = 40
39
40 Now in $\Delta$ OPQ
41
42 sum of angles in a triangle is 180
43
44 $\angle$ POQ = 180 - ( $\angle$ OPQ + $\angle$ OQP )
45
46 $\angle$ POQ = 180 - 40 - 40
47
48 $\angle$ POQ = 100
49
50 Now $\angle$ x + $\angle$ POQ + $\angle$ QOR = 180  (sum of angles in straight is 180)
51
52 $\angle$ x + 100 + 20 = 180
53
54 $\angle$ x = 60
55
56 hence value of x is 60 degree
57
58
59
60
61
62
63
64
65 \end{document}
66
```
